Speaker: Thomas Kaiser, University of Hannover

Date: Thursday, March 8, 2007

Time: 4:30pm

Room: B205 ~ Equad

Title: Where will UWB research go for the next decade?

Abstract:
One of the three major objectives of the "Wireless World Research Forum" (WWRF, see www.wireless-world-research-forum.org) is to find a strategic vision of future research directions. Ultra-Wideband (UWB) represents the most promising approach for wireless short-range communication and indoor localization and became therefore a fundamental part of the WWRF. Meanwhile, more than 20 widely known UWB experts participate in this initiative in order to jointly formulate the major research goals on UWB for the next decade. By mid of 2007 a white paper will be published as part of the WWRF's "Book of Visions". The talk will provide a snapshot of the current discussions and contributions.
